

3DHISTECH
THE DIGITAL PATHOLOGY COMPANY

CaseManager™

Collaborative Pathology Information System for optimizing the workflow from digitalization to the final report

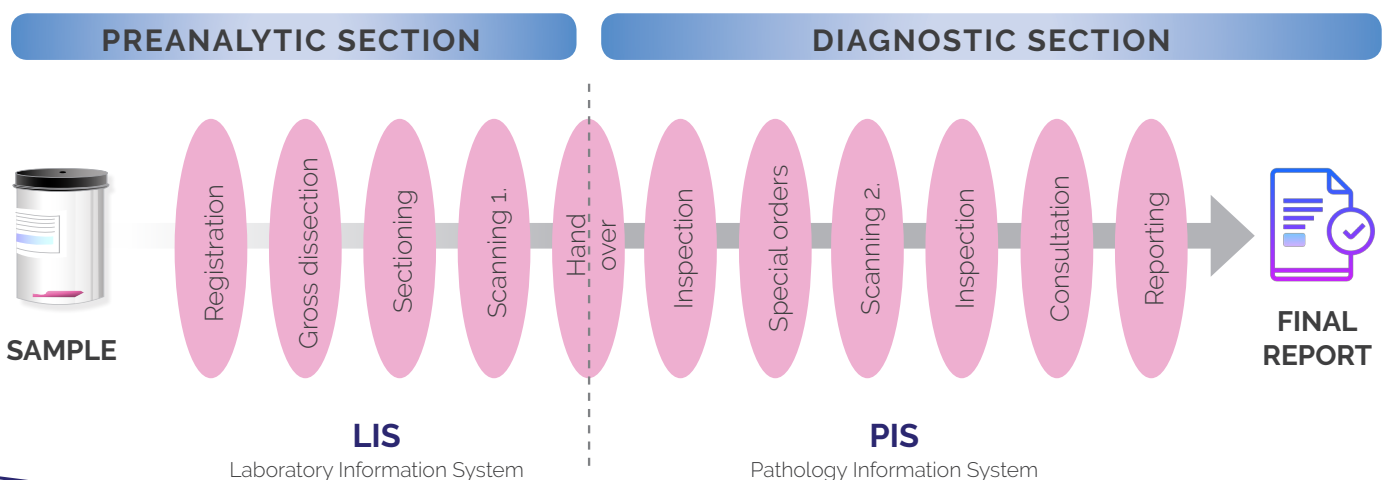

Quicker and easier diagnosis,
teleconsultation and progress
tracking

Short turnaround times are required in every histology laboratory while the pieces of information necessary for high-quality diagnosis in the digital environment are available in different systems. Pathologists require an integrated environment to find all the information on the same page.

With CaseManager™ 3DHISTECH establishes a collaborative working environment in the digital pathology workflow from digitalization to diagnosis and the final report.

When combined with a laboratory information system, CaseManager™ seamlessly integrates the digital pathology workflow from case registration to the final report, resulting in shorter turnaround times and thus increased laboratory efficiency.

Key Features

Easy-to-use case management functions

- Calendar-based personal task scheduler
- Case priority handling to assign higher priority status for urgent cases
- Task assignment to distribute the workload between pathologists; users can assign a case to themselves as well
- Ability to forward a case to another user
- Internal messaging system with built-in invitation function for real-time teleconsultations
- Ability to place additional orders for special stains for a better final diagnosis*
- Order status tracking by color coded signals: the pathologist can see at a glance when the additional stain is ready for evaluation
- Distraction-free mode: the pathologist can open a case in a separate browser tab without unnecessary menu options
- Final reporting function with image attachments and digital signatures
- Financial module*

Support for various branches of pathology

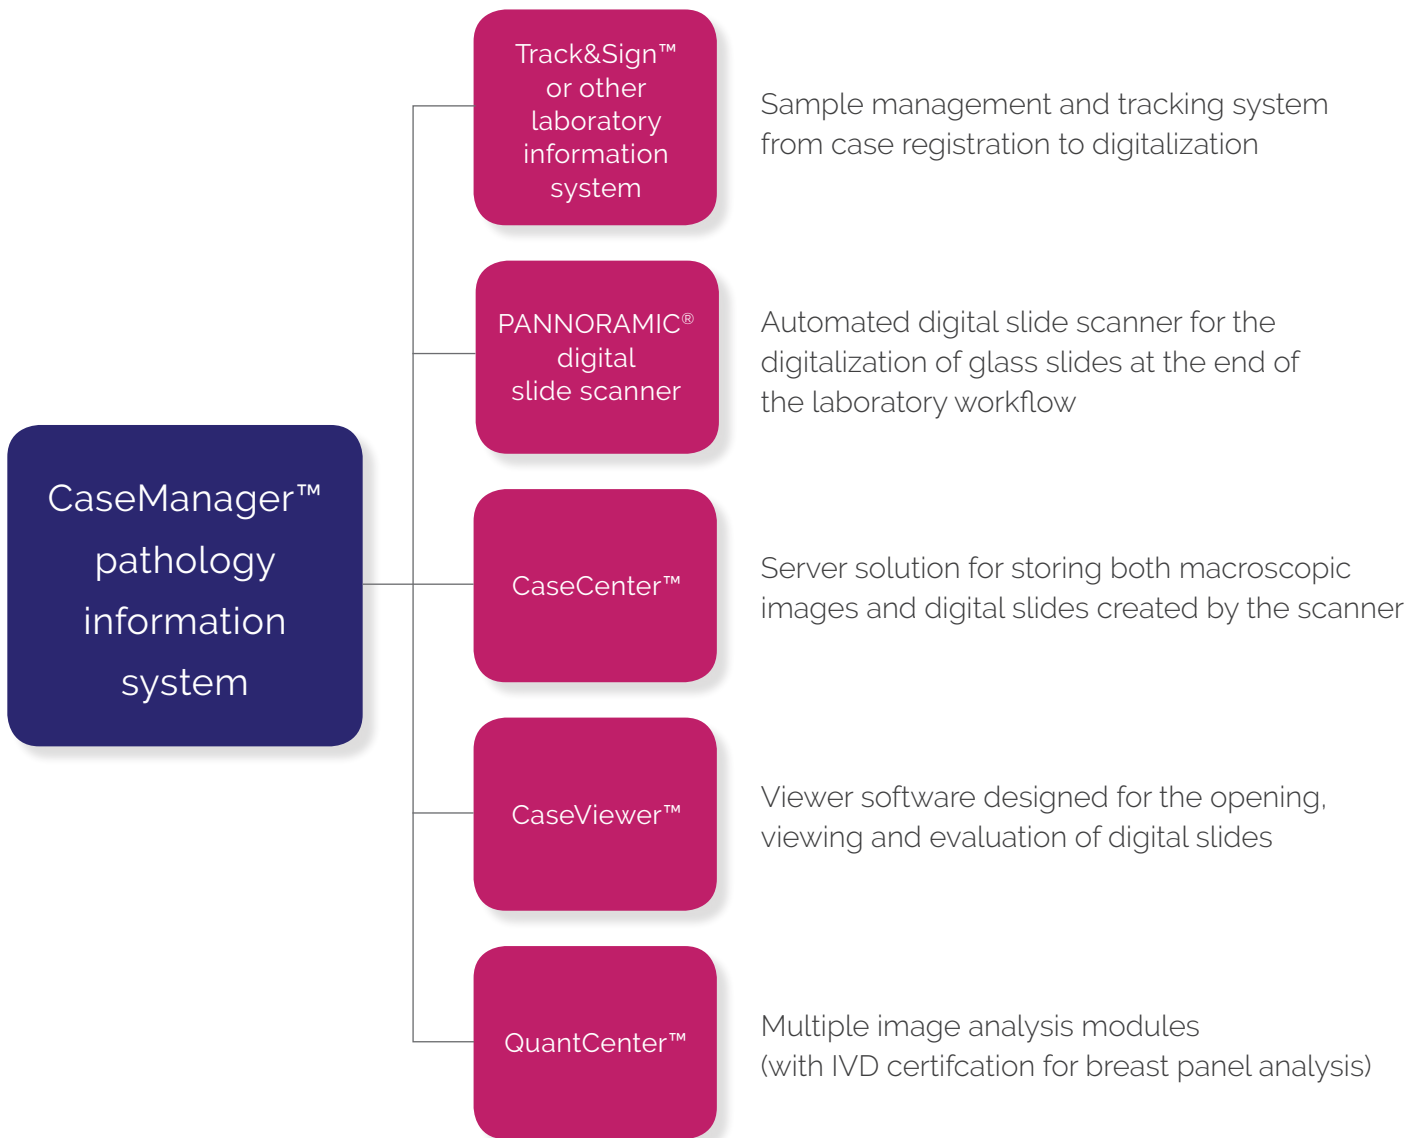

- Histopathology
- Cytology
- Autopsy, etc.

Support for widely used diagnosis codes: SNOMED T, SNOMED M, ICD or any other

*Not available in certain markets
